Kiltipper Woods
CARE CENTRE
Providing excellence in person centred care

SMART FLOW

THE CHALLENGE

Kiltipper Woods Care Centre (KWCC) is a purpose-built care facility. Kiltipper Woods Care Centre wanted to improve their water management and reduce their overall water usage and costs. It was extremely challenging for KWCC to validate their water bills.

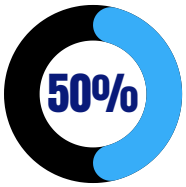
KWCC was spending a lot of time and resources looking for potential leaks. This was extremely difficult as it was a large care facility.

THE OUTCOME

As a high-quality care service, it was extremely important to find a solution which improves water,energy, sustainability, time savings and an overall improvement in water management. SMART FLOW has made significant enhancements by allowing KWCC to detect leaks, excessive usage, human error and appliance failure. This has successfully reduced KWCC's water consumption by 50%, total water savings for the year once the outside leak is resolved will be 12.8 million litres per year.

BENEFITS

- 30-day water report detailing all underlying issues
- 90% of issues are resolved without the need for mechanical plumbing call out charges.
- Energy reduction as typically 10% water saved is hot water.
- All water information is accessible in real time via App/ desktop



Water Savings

Litres of water Saved

SMART FLOW so far is great. Very good customer service, fast delivery of equipment and easily set up that day, very reliable and overall great value for money. We would highly recommend SMART FLOW to all. We moved to them as we endured years of frustration dealing with Irish Water when trying to confirm a water leak outside the building. SMART FLOW has quickly enabled us now to collect information to have meaningful discussions with the water utility company in the near future.A large financial rebate is on the cards. SMART FLOW are extremely helpful with providing information within the building with leaky toilets and faulty appliances shown up immediately on the App, thus saving additional money.
